Shown In Use

RMR-INS-VB-156

INSTALLATION INSTRUCTIONS

Note: Depending on the vehicle trim level, there may be plastic covers over the seat frame legs. This will need to be removed in order to install the base. Once installed, these can sometimes be replaces. Otherwise, store them for use later should the base be removed.

- 1. Move the passenger seat back to its rearmost position and loosen the front seat rail bolts or nuts. It may be necessary to loosen the two nuts or bolts at the rear of the seat as well for some vehicles in order to raise the front of the seat enough to clear the no drill base.
- 2. Gently lift the front of the seat to create a small gap between the seat frame and seat track.
- 3. Align the slots in the base with the seat bolts and slide the base into place. Press the no drill base as far in as possible so that the back of the slots engage the seat bolts. The pedestal platform should be near the console.
- 4. Re-tighten the bolts or nuts to secure the no drill base in place.
