RAM-VC-LEG-109

RAM Console Leg Kits

RAM Mounting Systems

Console Leg Kit for the DODGE CHARGER (2005-2010) DODGE MAGNUM (2006-2010)

SPECIFICATIONS

Drilling Requirements:
No drilling required

Finish:
Black Powder Coating

Placement:
Over transmission hump

INSTALLATION INSTRUCTIONS

The purpose of this instruction sheet is to illustrate the manufacturer's recommended method of installation for the RAM-VC-LEG-109 Leg Kit that includes anchor legs and a bagged hardware kit.

1. If the vehicle has a top plate and anchor legs supplied by the vehicle manufacturer, begin by removing them. Keep the hardware as this will be used to attach the RAM console front and rear anchor legs.
2. Next, remove the plastic console cover. Notice that there are a total of six threaded studs on the transmission hump of the vehicle (in some models the rear leg gets fastened using two threaded holes and bolts). Place the rear anchor leg on the two rearmost threaded studs, or over the threaded holes oriented so that the opening of the "C" shape is facing the rear of the vehicle. Otherwise, it will be difficult to fasten the hardware for the RAM Mount top plate. The front top plate leg will sit on the four threaded studs nearest the dashboard of the vehicle. See the illustration of how both the front and rear anchor legs will look when mounted properly.
3. Place the washers and nuts on the threaded studs and tighten.
4. Notice that there are four self-clinching nuts on the front leg. There is a sensor that is mounted between the front and rear legs. The mounting holes nearest the passenger side of the vehicle will line up with the RAM top plate. The off-centered holes are designed to fit the standard top plate. Use the hardware bag included to attach the top plate.

RAM-VC-LEG-109 (Leg Kit)

**Important product notes for:
Console applications**

RAM Console Leg Kits
RAM Mounting Systems

Area must be open or be made open to fit leg kits

SPECIFICATIONS

Drilling Requirements:

For some vehicles, drilling may be required. See vehicle specific kits for No-Drill™ applications and universal for all others.

Finish:

Black Powder Coating

INSTALLATION REQUIREMENTS

The area between the front seats must be accessible in order to mount the leg kits and top plates to support a console.

The area must be open between bucket seats or, if the vehicle has a 40/20/40 front bench seat or similar configuration, the center section must be removed.

If the vehicle has a floor mounted shifter, either automatic, manual, or 4x4 lever, make sure there is ample room to the rear of the shifter and the floor board is clear before making a RAM-VC-LEG kit selection. The installed RAM-VC-LEG kit should be installed in a manner that does not interfere with the operation of shifters or levers.

For some vehicles, there may be room between the center of the bench seat front and the dash of the vehicle. If removing the center section of the bench seat is not an option, but there is room at this location, consider the universal leg kit, short top plate, and short console box as a possible solution.

If the vehicle is equipped with a factory installed center console, make sure it can be removed without :

1. Permanently disabling the vehicle.
2. Exposing sensitive electrical equipment to harm.
3. Exposing mechanical systems to harm.
4. Interfering with factory installed safety equipment.

Some factory installed equipment and consoles cannot be removed. If this is the case for your vehicle, consider other RAM products designed for mounting electronics safely and securely in your vehicle.
